

系统: kali 19.04
手机型号: pixel
系统版本: sailfish-opm1.171019.011-factory-56d15350.zip
twrp版本: 3.3.0.0
Magisk版本: v20.4
wifiadb
frida版本 服务器版本12.8.0 客户端版本12.8.20

命令行

```
7z -x sailfish-opm1.171019.011-factory-56d15350.zip //解压官方镜像
7z x sailfish-opm1.171019.011-factory-56d15350.zip
cd sailfish-opm1.171019.011/

ls
tree
cat flash-all.sh

fastboot devices //刷入官方镜像
./flash-all.sh

adb devices
adb reboot bootloader
fastboot devices
fastboot boot /root/twrp-3.3.0-0-sailfish.img //刷入twrp
adb push /root/twrp-pixel-installer-sailfish-3.3.0-0.zip /sdcard/
adb devices
adb push /root/Magisk-v20.4.zip /sdcard/

adb reboot bootloader //安装Magisk
adb devices
adb shell //获取用户权限
ls
adb devices
adb install /root/com.ttxapps.wifiadb_2.1.3-810031745.apk //安装wifi-adb

adb devices
adb push frida-server /data/local/tmp //安装Frida-server
adb shell
frida-ps -U
```

需注意问题

第一遍刷入临时TWRP出现多个加密文件, Wipe -> Ad Wipe -> Internal Storage -> Swipe to wipe
一定要确认sdcard下面没有任何内容, 有时候wipe后还有文件需要二次wipe -> rebbot -> bootloader
